About Me

Flutter Developer with 3.5+ years of experience building high-performance iOS and Android apps, including a travel app with 1M+ downloads. Now combining mobile expertise with Generative AI, building LLM-powered features, RAG pipelines and AI agents for smarter app experiences.

Skills

Languages: Dart, Java, Swift, Python

Technologies: Flutter, Firebase, Firestore, RESTful API, Supabase, FastAPI

Generative AI: LangChain, LangGraph, RAG, AI Agents, Prompt Engineering, LLMs (OpenAI, Gemini), Embeddings, Vector Databases

State Management: GetX, Provider, Riverpod, Bloc

Development Tools: Android Studio, Xcode, Visual Studio Code (VSCode), Postman

API & Service Integrations: CleverTap, Google Maps, Google Mobile Ads (AdMob)

Payment Gateway Integrations: Razorpay, PhonePe, Checkout, Tamara, Tabby

Cloud: AWS S3, Cloudflare

AI Tools: Claude Code, OpenAI Codex, Google Antigravity

Version Control: Git, GitHub, BitBucket

Experience

Benzy Infotech: Flights & Hotels

Pune, Maharashtra

Flutter Developer

January 2025 - Present

- Developed and maintained Akbar Travels: Flights & Hotels (1M+ downloads) in Flutter for iOS and Android, building core flows for flights, hotels, visa services and holiday packages, and launching it on the Play Store and App Store.
- Integrated CleverTap push notifications, deep linking, Hive local storage, and Razorpay, Tamara and Tabby payment gateways for fast navigation and secure transactions.
- Built a real-time AI chatbot over WebSocket for booking, cancellation and ticket-download queries, with zero-delay messaging and instant hand-off to live support agents on escalation.

Movilidad Technologies: Travel

Pune, Maharashtra

Flutter Developer

June 2023 - Dec 2024

- Integrated **Google Maps** with real-time location tracking and battery-efficient **background services**, improving user engagement by 25% and app reliability and uptime by 20%.
- Implemented **WebSocket**-based real-time communication, reducing data sync delays by 30% and enabling instant updates across the app.
- Built a fully **responsive UI** with custom animations and transitions, boosting user retention by 15% and reducing design rework by 20%.

Projects

Benzy Infotech (Akbar Travels Group): Akbar Travels: Flights & Hotels

Android: [Play Store](#) | iOS: [App Store](#)

- Developed and maintained Akbar Travels: Flights & Hotels (1M+ downloads) in Flutter, delivering high performance on iOS and Android and launching it on both App Store and Play Store.
- Built core features for flights, hotels, visa services and holiday packages, delivering a seamless booking experience.
- Integrated **CleverTap** push notifications, **deep linking**, **Hive** local storage and payment gateways (**Razorpay**, **Tamara**, **Tabby**) for fast navigation and secure transactions.
- Built a real-time **AI chatbot using WebSocket** for booking, cancellation and ticket-download queries, with zero-delay messaging and instant hand-off to live support agents on escalation.

Movilidad Technologies: Buggy & Buggy Sarathi – Ride-Hailing Apps (Rider + Driver)

Buggy: [Play Store](#) | Buggy Sarathi: [Play Store](#)

- Built a complete ride-hailing platform: the **Buggy rider app** and the **Buggy Sarathi driver app** (built from scratch), increasing user engagement by 30% and customer satisfaction by 25%.
- Implemented real-time tracking with **Google Maps**, **Places API**, background location services and a live moving-marker feature, improving route accuracy and driver efficiency by 30%.
- Used **WebSocket** for instant ride requests, driver allocation and live updates, reducing response times by 40% and speeding up service delivery by 20%.
- Integrated a payment gateway, **AWS S3** document uploads, Firebase push notifications, a floating app bubble and custom audio ride alerts, streamlining driver onboarding and improving driver response rates by 25%.

Personal Project: TryWare AI – GenAI Virtual Try-On App

Android: [Play Store](#)

- Built an end-to-end **Generative AI virtual clothing try-on app** with a Flutter (GetX) frontend and an async **Python FastAPI** backend, taking it from idea to live on Google Play.
- Developed the AI image-generation pipeline on the **OpenAI gpt-image API**, migrating from Google Gemini/Imagen after evaluating output quality (face accuracy) and cost per image; supports Standard and HD generation modes.
- Designed a **race-condition-safe credit system** using row-level locking (async SQLAlchemy), with Firebase Auth and **Razorpay** webhooks for tiered credit-pack purchases.
- Deployed on a **Hetzner VPS** with **Docker Compose**, Caddy (auto-HTTPS) and **GitHub Actions CI/CD**, ensuring a stable, production-ready backend.

Education

Dr Babasaheb Ambedkar Technological University

B.Tech in Computer Science and Engineering | CGPA: 8.47

Pune, India

February 2019 - June 2023
